

DIVINE LIGHTING

Replace your Conventional Lighting with an LED Retrofit

The technology of light emitting diodes, compact fluorescent lamps, and halogen incandescent bulbs prove to have significant energy savings over the traditional incandescent. On average, they will use anywhere from 20-75% less energy and last up to 20 times longer, thereby saving you money. Although the initial expense of an energy-efficient bulb will most likely be higher, the newer bulbs will not have to be replaced as often and usually last much longer.

The inherent benefits of LEDs over other light sources are their efficiency, long life, and lower maintenance costs. LED lighting is the most efficient lighting available today and will immediately and substantially lower your energy costs.

Comparison Between LED, CFL and Incandescent Light Bulbs:

	LED	CFL	Incandescent
Lifespan in hours	50,000	10,000	1,200
Watts per bulb (equiv. 60 watts)	10	14	60
KWh of electricity used over 50,000	300-500	700	3000
Cost of electricity (@ 0.10per KWh)	\$50	\$70	\$300

Increase Energy Savings by Switching to LED Today!

Established in 2002, Divine Lighting is a locally owned manufacturing company located in Conroe, Texas. In addition to making new light fixtures, Divine also offers LED Retrofit kits and depending on location, installation. Retrofit kits allow the original fixture to remain intact while replacing the fluorescent, incandescent, or metal halide bulb components with a more energy efficient light source, which is more cost effective than purchasing new fixtures. If the current fixture lenses have discolored over time and need to be replaced, Divine can provide you with those too!
